

ELECTRONIC CLINICAL DOCUMENTATION – MADE FOR ASCs

SIS Charts: Smart Design. Smart Fit. Smart Access.

From the No. 1 rated ASC EHR vendor, six years running¹, comes the latest in clinical documentation technology: SIS Charts™. With a visually appealing design that can be configured to fit an ASC's processes, SIS Charts makes electronic nursing and physician documentation easy; so easy, in fact, that clinicians frequently tell us how much they love using SIS Charts.

SIS Charts, a cloud-based product, supports nursing documentation from Preop through Recovery. It enables physicians to quickly complete their orders and op notes from a physician desktop that indicates outstanding documentation required to maintain compliance and speed reimbursement. Physicians can document using pre-populated templates or they can dictate to a transcription service via an optional interface².

The No. 1 Ranked
ASC EHR vendor six
years in a row.

¹Black Book Research Rankings – “Top Technology Solutions: Ambulatory Surgical Centers” March 2021, “Top Technology Solutions: Ambulatory Surgical Centers” February 2020, “Top Technology Solutions: Ambulatory Surgical Centers” April 2019, “Top Ambulatory Electronic Health Records Solutions: Ambulatory Surgical Centers” April 2018, “Top Electronic Medical Records/Electronic Health Records Vendors” April 2017, & “Top Ambulatory Electronic Health Records Vendors Comparative Performance Result Set of Top EHR Vendors,” May 2016.

²Requires separate license to third-party transcription service.

³ Requires separate license to a third-party device integration solution.

Physician Mobile

Physicians are able to use SIS Charts on their smartphone, tablet, or computer, meeting their expectations for anywhere, anytime access to the EMR. With Physician Mobile, physicians can:

- View their schedule with live updates
- Review attachments and case details before surgery
- Complete their medication reconciliation and op notes at their convenience

SIS Charts Anesthesia

Anesthesia documentation replaces paper anesthesia documentation with an electronic chart for all care phases– preop, intraop, and postop.

- Intuitive anesthesia graph and record including medications administered, vitals, and anesthesia notes
- Optional integrated monitor and ventilator capture solution³
- Capture anesthesia charges for billing

TRANSFORM YOUR PATIENT CARE

Value of Electronic Clinical Documentation

Designed specifically for fast-paced, procedure-driven ASCs, SIS Charts does more than just replace inefficient paper charts. It supports the delivery of safe patient care by communicating patient information in near real-time. A patient panel is always visible on the left side of the screen to show patient details. If an update is made to an allergy, for example, the patient panel automatically updates without refreshing the screen.

Patient Tracking

SIS Charts Tracker provides clear visual representation of every patient's location and movement through the perioperative process. SIS Charts Tracker uses the documentation in SIS Charts to present patient milestones in near-real time, eliminating the need to enter duplicate time notations in a separate patient tracking system.

The PreOp/PACU Board shows which patients are in the bays or in the queue, with key information for each patient. The OR Board, organized by room, shows scheduled procedures and patients with relevant information including milestones. Meanwhile, the Waiting Room Board uses unique identifiers and bright, clear graphics to show a patient's progress – which reduces questions to the front desk staff.

Delivered in the Cloud

SIS Charts is delivered securely in the cloud. Cloud-based solutions offer significant advantages over traditional client-server or hosted applications. Engineered for high availability, SIS Charts is hosted at a secure data center with backups. And it lowers the total cost of ownership by reducing IT infrastructure and support costs and providing automatic upgrades.

SIS Charts is part of SIS Complete, a comprehensive ASC software solution that redefines the patient, physician, and ASC staff experience. It is also available for use with other SIS ASC management solutions.

Seeing is believing. Visit:

SISFirst.com

Patient Engagement

SIS Charts includes SIS Exchange, enabling patients to electronically complete their pre-surgical questionnaires and review instructions at their convenience. Patient-entered information is available for review in SIS Charts for nurse review and verification, which is designed to significantly reduce preop phone call time. Reminders before surgery help reduce same-day cancellations and prepare patients for their payment responsibility.

First Databank Integration

SIS Charts includes the First Databank MedKnowledge® drug database. The drug formulary uses tags to automatically narrow down the medications that appear based on the medications that are typically given for a certain type of surgery and in a phase of care. The user can search the ASC's formulary or quickly search First Databank's formulary.

Surescripts Integration

SIS Charts includes integration with the Surescripts® Health Information Network enabling electronic medication reconciliation. This solution imports the patient's current home medications into SIS Charts, reducing or eliminating manual drug data entry.
