ELECTRONIC ANESTHESIA DOCUMENTATION FOR SIS CHARTS

ASC-specific, electronic, anesthesia documentation for all phases of care

SIS CHARTS ANESTHESIA™

Benefits of electronic anesthesia documentation include:

- Comprehensive electronic documentation including medication administration, vitals, and anesthesia notes.

- Intuitive anesthesia graph and record.

- Patient-specific anesthesia plans.

- View and sign consents, orders, and attachments.

- Optional integrated monitor and ventilator data collection via a third-party solution.*

SIS Charts Anesthesia™, replaces paper anesthesia documentation with electronic charting for all care phases – PreOp, IntraOp, and PostOp. With the same look and feel as SIS Chart's Nursing Desktop and the Physician Desktop, the Anesthesia Desktop is familiar and easy-to-use, with an added productivity boost of optional automated monitor and ventilator connectivity.*

PreOp

Electronic anesthesia documentation starts in PreOp with the anesthesia PreOp exam, and includes documentation of elements including anesthesia type, ASA score, and block notes. Anesthesia providers create patient-specific electronic anesthesia plans, and with SIS Charts Anesthesia, they can easily view and sign consents, orders, and attachments.

IntraOp

While in the OR, the anesthesia documentation includes vitals, medications administered, and anesthesia notes on an intuitive graph that eases the transition from paper to an electronic record. SIS Charts Anesthesia automatically captures vitals and physiologic data from monitors and ventilators before anesthesia documentation begins.*
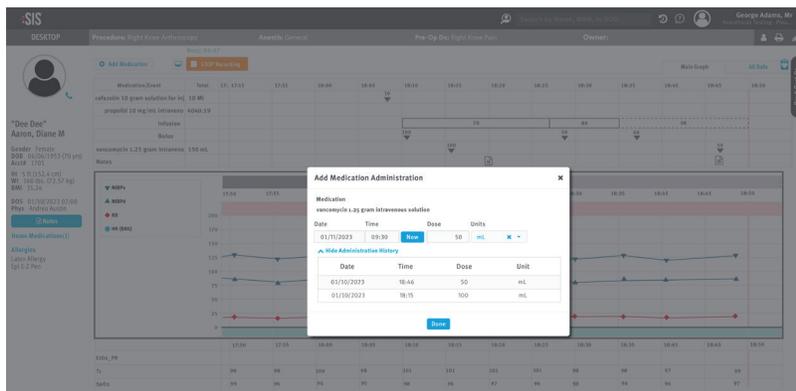

*Automated monitor and ventilator connections at an additional charge. Additional connections available for PostOp vitals capture at an additional charge.

SIS | OPERATE SMART™

PostOp

Anesthesia providers electronically document the anesthetic PostOp exam. Comprehensive electronic, documentation enables the accurate capture of charges to support anesthesia billing. Optional automated vitals capture is also available in PostOp.*

SIS Charts Anesthesia supports ASCs in their move to an all-electronic medical record, saving time and money, while streamlining clinical workflows.
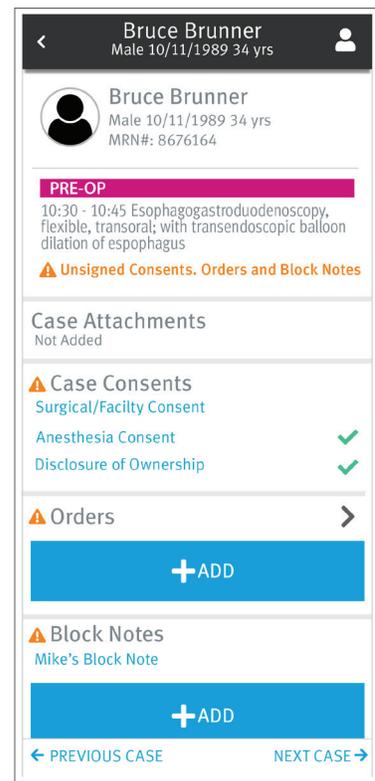

Intuitive Anesthesia Documentation

"It's easy to access, easy to give the drugs, and easy to correct the documentation of times or dosages if necessary. I really like the ability to click and slide to change a time. Everything is very easy and straight forward."

Mobile Anesthesia Documentation

With SIS Charts Anesthesia Mobile, anesthesia providers can use their iOS or Android smartphone or tablet to access their current schedule and view and sign consents, orders, attachments, and regional block notes. This capability puts anesthesia documentation in the palm of your anesthesia providers' hands, making it convenient and easy to complete their tasks.
