SURGICAL INFORMATION SYSTEMS™

ASC SYSTEM INTEROPERABILITY

Maximize staff efficiency when you connect SIS Complete™ with the rest of your ecosystem.

SIS Complete offers interoperability capabilities that help to ensure that ambulatory surgery centers (ASCs) can integrate with a broad range of applications*. As the core ASC management and clinical system, SIS Complete houses key data, including patient, scheduling, and billing information that ASCs may need to share with other applications. Data sharing helps save countless resource hours, expedites workflows, and reduces opportunities for human error – improving your facility's efficiency and contributing to better patient care.

SIS Complete currently integrates **with more than 90 third party solutions** – and we're just getting started. SIS' approach to interoperability delivers a range of integration options and message types, making integration with an array of systems cost-effective and efficient.

Below are some examples of common interfaces.

Interoperability benefits include helping to:

- Improve the quality of care and patient experience
- Streamline operational & clinical workflows
- Reduce the cost of care
- Mitigate staff burnout
- Protect patient data

Interoperability enables your ASC software to integrate with complementary third party solutions. Common interfaces from SIS Complete include:

- Transcription
- Inventory management
- Patient monitors
- Practice management systems
- Hospital systems
- Medication cabinets
- Patient surveys
- Labs
- Clearinghouses
- and more
